

**Job Posting
IT Security Analyst
Vancouver, BC.**

THE OPPORTUNITY

We have an exciting opportunity for an IT Security Analyst to join our high-performing team in a remote working environment.

What You'll Do: The IT Security Analyst performs two core functions for the enterprise - day-to-day operations of the in-place security solutions, and the identification, investigation, and resolution of security breaches detected by those systems. Secondary tasks may include involvement in the implementation of new security solutions, participation in the creation and or maintenance of policies, standards, baselines, guidelines, and procedures as well as conducting vulnerability audits and assessments.

Who You Are: You are self-motivated, driven, organized, and demonstrate strong time management skills. This role will require you to be fully aware of the enterprise's security goals as established by its stated policies, procedures, and guidelines; You lead by example and actively work towards upholding those goals consistently.

Work Environment: This role will be working from home in a remote environment.

RESPONSIBILITIES

Strategy and Planning

- Participate in the planning and design of enterprise security architecture, under the direction of the IT Security Manager, where appropriate;
- Participate in the creation of enterprise security documents (policies, standards, baselines, guidelines, and procedures) under the direction of the IT Security Manager, where appropriate; and,
- Participate in the planning and design of an enterprise business continuity plan and disaster recovery plan, under the direction of the IT Security Manager, where appropriate.

Acquisition and Deployment

- Maintain up-to-date detailed knowledge of the IT security industry including awareness of new or revised security solutions, improved security processes, and the development of new attacks and threat vectors;
- Recommend additional security solutions or enhancements to existing security solutions to improve overall enterprise security; and,
- Perform the deployment, integration, and initial configuration of all new security solutions and of any enhancements to existing security solutions in accordance with standard best operating procedures generically and the enterprise's security documents specifically.

Operational Management

- Maintain up-to-date baselines for the secure configuration and operations of all in-place

devices, whether they be under direct control (i.e. security tools) or not (e.g. workstations, servers, network devices);

- Maintain operational configurations of all in-place security solutions as per the established baselines;
- Monitor all in-place security solutions for efficient and appropriate operations;
- Review logs and reports of all in-place devices, whether they be under direct control (i.e. security tools) or not (e.g. workstations, servers, network devices). Interpret the implications of that activity and devise plans for appropriate resolution;
- Participate in investigations into problematic activity;
- Participate in the design and execution of vulnerability assessments, penetration tests, and security audits;
- Participate in security investigations and compliance reviews, as requested by internal or external auditors; and,
- Provide tier 3 support for end users for all in-place security solutions.

QUALIFICATIONS

Education And Experience

- 5+ years' experience in IT Security and network operations;
- Certificate, diploma or degree in Computer Science or a related field; and,
- Advanced certifications such as SANS GIAC/GCIA/GCIH, CISSP or CASP and/or SIEM-specific training and certification.

Skills, Knowledge And Required Competencies

- Self-motivated and always knowing what needs to get done;
- Fast learner, constant researcher, and able to effectively deal with rapidly changing priorities and requirements;
- In depth, hands on knowledge of Windows Server Administration, Active Directory, VPN, Office365, Firewall, Networking, Multi-Factor Authentication;
- Experience in enterprise security architecture design;
- Experience in enterprise security document creation;
- Experience in designing and delivering employee security awareness training;
- Extensive working knowledge of information security and vulnerabilities/threats, security best practices, tools, and techniques, including encryption;
- Endpoint Protection (Anti-virus/Anti-Malware), Privilege Access Management, Data Loss Prevention solutions;
- Experience in Network Security;
- Experience running production 24/7/365 operational environments;
- Experience with multi-datacenter architectures;
- Ability to build and work with multi-disciplinary teams to achieve goals and to meet deadlines in a fast-paced environment;
- Ability to prioritize, and re-prioritize work as required;
- Solid written & verbal communication; and,
- Risk and Incident Response training and/or experience will be considered an asset.
